

High-Performance Networking for a High-Performance World

The Challenge

Maintaining high network availability and performance is crucial for healthcare functions – both clinical and non-clinical - due to the nature of their operations. Hospitals and clinics rely heavily on uninterrupted network services to manage patient records, support telehealth services, operate medical devices, and coordinate care. Any network downtime can lead to significant risks, disrupt patient services, and harm the facility's reputation.

Uninterrupted network services are critical for maintaining a seamless patient experience, both in-person and via telehealth services. This reliability helps healthcare providers deliver superior patient care, which can drive patient loyalty and improve health outcomes.

- **75%** of IT teams struggle to optimize and maintain their growing network
- **4 or 5:** the number of network monitoring tools used by enterprise companies
- **2 of 3:** IT managers say they fall-short when managing network visibility due to a lack of time and expertise

The Solution

LiveAction's Network Intelligence Platform transforms complex data into actionable insights, providing organizations with a comprehensive view of their network. Customers can rapidly take action to resolve network issues at scale increase employee productivity and reduce business risk.

Key Benefits

+ Improve Network Visibility

Get full visibility into network and application performance across multi-vendor, multi-domain and multi-hybrid cloud networked environments.

+ Accelerate Mean Time to Repair Network Issues

Proactively identify, troubleshoot, and quickly resolve network and application performance issues regardless of where they occur to speed time to repair, avoid costly downtime, and meet business needs.

+ Drive Increased Customer Experience and Satisfaction

Efficient network performance ensures quick and secure access to patient information, fostering trust and satisfaction among patients and staff.

+ Enhanced Voice and Video Quality

VoIP and video conferencing applications are essential for seamless communication between healthcare professionals, facilities, and patients.

Make Your Network Your Competitive Advantage

Network Performance Monitoring

Ensures quick and secure network operations, fostering trust and satisfaction among patients and staff.

Flow | API | SNMP | Cloud

Packet Capture & Forensics

Rapidly detect and resolve network issues to minimize disruption in patient care.

Network Packets

Use Cases

Network and application problems relating to electronic health records, telemedicine, and medical device operations.

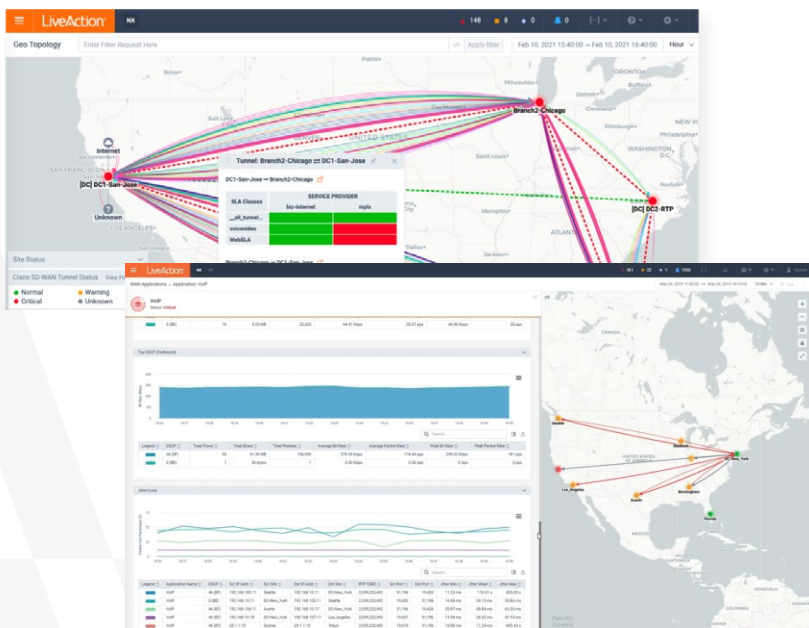

Rapidly detect and resolve network issues to prevent disruptions in patient care and maintain operational efficiency.

In-depth forensic analysis capabilities to investigate and understand the root cause of incidents quickly.

Unlock superior performance for your VoIP and video conferencing applications, essential for seamless communication within and across facilities.

“Helped with QoS and understanding bandwidth flows.”

– *Florida Cancer Specialists*

“How easy it is to visually see traffic patterns. Cost was a major contributor, as well.”

– *Enterprise Healthcare Company*

“Enabled us to monitor our MPLS link to keep an eye on link utilization and identify any issues.”

– *Atrium Health Navicent*

“LiveAction has the widest range of functionality and the best methods of storage and visualization of any of the tools out there.”

– *The Total Economic Impact™ of LiveAction LiveNX and LiveWire – Forrester 2023*

“[The organization was] looking to upgrade the circuit for \$80,000 to \$100,000 a year until we used LiveAction to determine that was not the problem.”

– *The Total Economic Impact™ of LiveAction LiveNX and LiveWire – Forrester 2023*
